

Advanced Log Analysis Report

Timestamp	Event ID	Source IP	Destination IP	Notes
2025-08-18 12:00:00	4625	192.168.1.100	8.8.8.8	Failed login with suspicious outbound DNS
2025-08-18 12:05:00	4625	192.168.1.100	8.8.4.4	Multiple failed login attempts

Log analysis indicates repeated failed login attempts (Event ID 4625) from a suspicious internal IP address. These events were correlated with unusual outbound DNS traffic, suggesting possible malicious activity or credential brute-force attempts. Further investigation and monitoring are recommended to confirm the threat.

Anomaly Detection:

Unusual login attempts and repeated authentication failures were observed within a short time window, indicating abnormal behaviour compared to baseline activity.

Log Enrichment:

The source IP was enriched with contextual data, indicating internal network origin. DNS requests to external servers (8.8.8.8) suggest possible command-and-control communication attempts.
