

Alert Triage with Threat Intelligence Report

Alert ID	Description	Source IP	Priority	Status	Alert ID
006	Suspicious PowerShell Execution	192.168.1.101	High	Open	006

The alert indicates suspicious PowerShell execution activity originating from an internal system. Such behaviour is often associated with post-exploitation techniques. Initial triage classified the alert as high priority due to the potential for system compromise.

IOC Validation:

The source IP address was analysed using threat intelligence platforms such as Virus Total and AlienVault OTX. The results indicated suspicious behaviour with potential links to known malicious activities, confirming the need for further investigation.

Conclusion:

Threat intelligence validation helped confirm the severity of the alert and supported prioritization for immediate response.
