

Incident Escalation and SITREP Report

Escalation Summary

A high-priority security alert related to unauthorized access was identified during SOC monitoring. Initial triage was performed by the Tier 1 analyst, confirming suspicious login activity. Due to the severity and potential impact, the incident was escalated to Tier 2 for deeper investigation and response.

Escalation Details Table

Incident ID	Type	Priority	Escalated To	Reason
005	Unauthorized Access	High	Tier 2 SOC Analyst	Suspicious login behaviour detected

Incident ID	Type	Priority	Escalated To	Reason
-------------	------	----------	--------------	--------

Unauthorized Access on Server-Y

Summary:

An unauthorized access attempt was detected at 13:00 from IP address 192.168.1.200. The activity was associated with abnormal login behaviour and mapped to MITRE ATT&CK technique T1078 (Valid Accounts).

Actions Taken:

- Initial triage completed
- System isolated
- Escalated to Tier 2 for further analysis

Conclusion

The escalation process ensured timely handling of a high-risk incident. Proper communication between SOC tiers enabled efficient investigation and response.
