

Threat Intelligence Integration Report

Alert ID	IP Address	Reputation	Source	Notes
003	192.168.1.100	Malicious	AlienVault OTX	Linked to possible C2 activity
004	192.168.1.101	Suspicious	Virus Total	Detected in multiple threat reports

Threat intelligence integration was performed by correlating alert data with external intelligence sources such as AlienVault OTX and Virus Total. The analysis revealed that the identified IP addresses have been associated with malicious and suspicious activities, indicating a high probability of compromise or attack behaviour.

Threat Hunting (MITRE T1078 – Valid Accounts):

A search was conducted to identify abnormal account usage. Unusual login patterns and non-standard user activity were detected, indicating possible misuse of valid credentials.

Conclusion:

Threat intelligence enrichment enhanced the visibility of potential threats and helped prioritize alerts based on external reputation data.
