

SOAR Playbook Automation Report – Phishing Response

Section 1 — Objective

The objective of this playbook is to automate the response to phishing alerts by validating IP reputation, blocking malicious sources, and creating an incident ticket.

Section 2 — Playbook Workflow

1. Receive phishing alert from SIEM (Wazuh)
2. Extract source IP address
3. Check IP reputation using Virus Total / OTX
4. If malicious → Block IP using CrowdSec
5. Create incident ticket in The Hive
6. Notify SOC team

Section 3 — Playbook Execution Table

Step	Status	Notes
Check IP Reputation	Success	IP flagged malicious
Block IP	Success	IP blocked successfully
Create Ticket	Success	Case created in the Hive

Section 4 — Summary (50 words approx.)

The SOAR playbook successfully automated phishing incident response by integrating threat intelligence and response tools. It reduced manual effort and improved response time by automatically validating and blocking malicious IPs while generating incident tickets for further investigation.
